Mintlify

Closing our self-service sandbox gap

TODAY

We have no sandbox for prospects to try

No self-service path

A prospect can't explore Omnisient without a live call.

Back Office bottleneck

Every seller and buyer walkthrough needs hands-on support.

The target

- Seller publishes unaided in under 30 minutes
- Buyer reaches a governed collaboration with no human help

> Right now, evaluating Omnisient means booking our time first.

THE PROPOSAL

Add Mintlify as our self-service front door

Mintlify gives prospects a public-plus-protected documentation and sandbox experience, without exposing anything Omnisient doesn't choose to show.

Public + protected pages

Free-to-browse docs, gated content behind login.

Authenticated MCP

Agents like Claude Code get the same permission-aware access as a human.

Region-aware API explorer

OpenAPI 3.1 + server variables route each prospect to the right region.

> One documentation platform, many safe views – public, registered, entitled.

HOW IT WORKS

What Mintlify actually does

Under the hood

- Mixes public pages with protected content behind full or partial authentication
- JWT/OAuth data personalises groups, content, and API playground inputs
- Server variables set a user's region or environment in the live API explorer
- OpenAPI 3.0/3.1 with multiple servers fits a region-aware sandbox API
- Repository-backed authoring, previews, analytics, and Markdown outputs support docs-as-code
- Authenticated MCP distinguishes public from protected content and respects groups

> Built for both human prospects and AI agents to self-serve safely.

THE COMPARISON

Today vs. with Mintlify

Today

No sandbox. Every evaluation runs through Back Office or Sales.

With Mintlify

- Self-service sandbox – no contract or InfoSec review needed to start
- Region-correct docs and API explorer out of the box
- Same access rules for humans and AI agents

WHY IT MATTERS

This is a Sales problem first

Sales spends cycles arranging Back Office demos instead of selling. A self-service sandbox lets prospects prove value on their own time.

- Shortens the sales cycle – prospects self-qualify before a call
- Removes Back Office as a bottleneck for every demo
- Gives Sales a shareable link instead of a scheduled walkthrough

> Every hour Back Office spends on demos is an hour not spent on delivery.

THE NUMBERS

What this costs

	Current	Proposed
Platform	Not in use	Mintlify Enterprise
Monthly cost	R0	Unknown – quote pending
Annual cost	R0	Unknown – quote pending

> Mintlify's enterprise pricing isn't public. SSO, SCIM, and stronger RBAC all sit behind an Enterprise quote we don't have yet.

This is the self-service OKR

- Sellers should publish unaided in under 30 minutes – today they can't without Back Office
- Buyers should reach a governed collaboration with zero human assistance
- Every month without a sandbox is a month of Sales and Back Office doing manual walkthroughs

> This isn't a nice-to-have – it's the self-service OKR we've already committed to.

NEXT STEPS

The ask

- Run a scoped investigation spike into Mintlify – access control, agent/MCP behaviour, and commercial terms
- Come back with a real Enterprise quote and a security/trust assessment
- Decide whether to move to a full proof-of-concept

Sign-off needed

CTO, CPO, and InfoSec before the spike begins.
